

The Importance of Health Screenings for Preschoolers

Why are health screenings important to my child?

- * Screenings give you valuable information about your child's development.
- * You will become connected with resources to help prepare your child for success in school.
- * Screening will help identify any hearing, vision, health, growth, or general development needs your child may have.
- * For many children, screenings can mean the difference between success and failure in school. If potential problems are detected any of the screened areas, the child then has the opportunity to receive specialized help before entering kindergarten.
- * No concerns about your child's health, growth, or development? Your school district will still need your child's screening information and immunization information on file at school.

In the WCESC Preschools, all children are screened for Vision and Hearing

As part of the health screening, parents should have their child screened or have exam for:

- * Hemoglobin
- * Lead
- * Height
- * Medical Assmt
- * Weight
- * Dental

Please see below for locations & contact information of local clinics, dentists, other health screening resources
