| Students Isolated     | 1 | 0                      |

### Definitions:

- Quarantined – 14 days is the length of time that anyone who has been in direct contact with someone who tests positive for the COVID-19 virus must quarantine as symptoms can start anywhere from 2 – 14 days after exposure. The quarantine period starts on the last day the person was known to have had contact with a person who tests positive. The quarantine may end only after 14 days if the individual was all symptom-free the entire time.
- Isolated – Individuals with symptoms who: were screened and are at home, had a positive test or have a probable diagnosis.

**Note:** W.C.E.S.C. cannot disclose specific case information due to FERPA/HIPAA laws.
